## Why Diamonds and Pearls?

### Feel the Difference

DIAO gives you an exceptional amount of control to:

- Remove material quickly and effortlessly. A coarse diamond without the chatter.
- Efficiently remove tooth structure with less pressure.

### Outstanding Efficiency

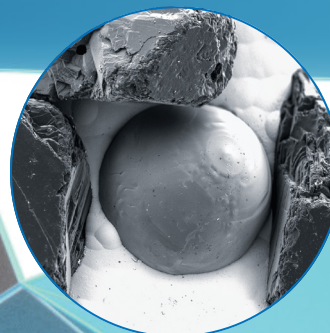

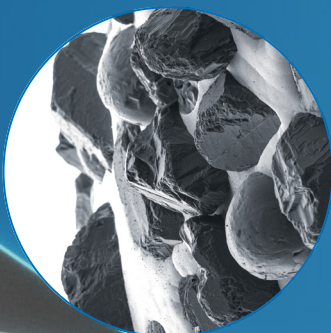

Save more chair time with DIAO:

- 27% greater initial sharpness than similar coarse diamond instruments.\*
- 34% longer service life when compared to similar coarse grit instruments while removing more dental material.\*

John Flucke, DDS

*"DIAO provides smooth and precise performance while also giving the doctor an amazing amount of control. The idea behind DIAO is combining the diamond cutting particles with ceramic pearls that help filter away enamel and dentin dust during preparation. The result is a bur that cuts like nothing else on the market."*

Magnified images of DIAO's diamonds interspersed with pearls.

Timothy Bizga, DDS, FAGD

*"DIAO was able to not only efficiently cut and grind through all materials, but left a surprisingly smooth and polished surface in its aftermath. There must really be something to this 'diamonds and pearls' thing after all!"*
