"Dental Arts Signature Restorations really is a world class lab when it comes to cosmetic cases and reconstructions. When delivering multiple units, I have to do very few adjustments, and the cases always look beautiful. I am always proud of the cases I do with them; I highly recommend Dental Arts Signature Restorations Laboratory for the cases that need to come back looking perfect!"

Gregory Calloway DDS

Like all DAL restorations, DAL Signature restorations are skillfully crafted using the latest technologies and esthetic materials. What makes them so different? The experience and highly specialized training of our staff is combined with multi-layer build-up techniques and intrinsic coloring to produce the most in-depth, vital-looking restorations available. This clinical knowledge in conjunction with our diagnostic and case planning expertise ensures you achieve consistent, predictable results. Additionally, our digital platform features 3D CAD (computer aided design), precision German milling machinery and a complete range of 3D printing technology, creating restorations with precise fits, maximum esthetics and ideal product performance.

Crafted by the Very Best to Ensure Predictable, Highly Esthetic Results

The DAL Signature Restorations team has received extensive training from several highly esteemed organizations. This commitment to high-level training provides the necessary esthetic skills, function/occlusion knowledge, and technical discipline to ensure restorations that are perfect in every aspect - color, shape and design. The DAL team is trained in the disciplines of many education centers, including The Dawson Academy, Spear, The Nash Institute, and Snow Mountain Seminars.
