CINTAS
READY FOR THE WORKDAY™

THE CINTAS WASH PROCESS

Cintas industrial laundry facilities follow a unique healthcare wash process developed in conjunction with our chemical provider WSI.

Wash Formula(s)

- Cintas utilizes unique blends of powerful surfactants, enzymes and alkaline builders to physically remove/chemically destroy microorganisms that might be on the textiles¹

Mechanical Agitation

- Mechanical Agitation is very effective in physically removing bacteria/viruses from textiles²
- Cintas process has significantly greater mechanical agitation than home laundering³

Temperature

- Cintas utilizes wash temperatures between 100°–160°F²
- Uniform garments are subsequently subjected to temperatures in excess of 250°F in the dryer, steam tunnel and presses, providing an additional level of sanitization through the thermal reduction and elimination of microorganisms³
