

RAYFace

Revolutionize Diagnostics

The world's first 3D face scanner that captures a facial scan in less than 0.5 seconds

Did You Know?

RAYFace features **high-quality multi-sensor** image processors to provide precise face measurement data based on clear images.

Instantly acquires 3D scans of the facial structure and dentition within **0.5 seconds**.

Designed with **Intelligent Auto Alignment** which enables users to generate a 3D image of the patient's face.

Built with **RAYTeams**, a cloud platform that **facilitates real-time communication** between dental practices and laboratories.

Equipped with a highly scalable 3rd party software that **effortlessly integrates** with diverse software platforms to establish connectivity.

The integrated **Slice Explorer** lets you dive into specifics. Just double-click on any area and you can scroll through individual CBCT scan layers, one slice at a time.
