THE SIGNIFICANT CHOICE IN ANTI-GINGIVITIS TOOTHPASTE!

MI Paste® ONE Perio

An Innovative Combination of RECALDENT® (CPP-ACP) and Stannous Fluoride

MI Paste® ONE Perio Provides:

- A range of therapeutic benefits
- Long lasting anti-biofilm efficacy to prevent and help recovery from gingivitis
- Bio-available calcium, phosphate and fluoride to promote remineralization and relieve sensitivity

Since 1921
100 years of Quality in Dental

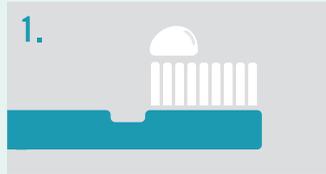

MI Paste® ONE Perio & The MI Paste® Family

MI Paste® products are the essential solutions which release calcium, phosphate, and fluoride. They are the first of their kind – containing naturally derived milk protein and fluoride for safe and effective treatment of white spot lesions, non-cavitated tooth demineralization, sensitivity and now gingivitis.

The Effective Delivery Vehicle for Fluoride

When fluoride is used with RECALDENT® (CPP-ACP), the peptide preferentially combines with, and stabilizes, fluoride to create the ideal source for building fluorapatite. Using bio-available calcium and phosphate, the full potential of fluoride to help protect and repair teeth can be achieved.

HOW TO USE:

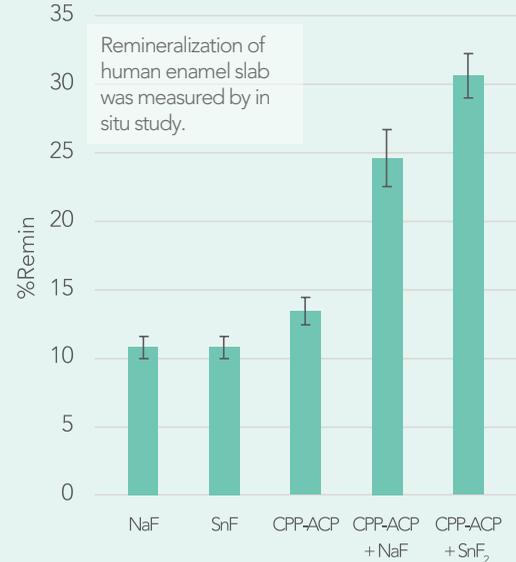

1. Apply a small, pea-size amount of MI Paste® ONE Perio to your toothbrush.

2. For best results, brush for 2 minutes, expectorate and avoid rinsing and eating or drinking for 30 minutes after brushing. Use twice daily.

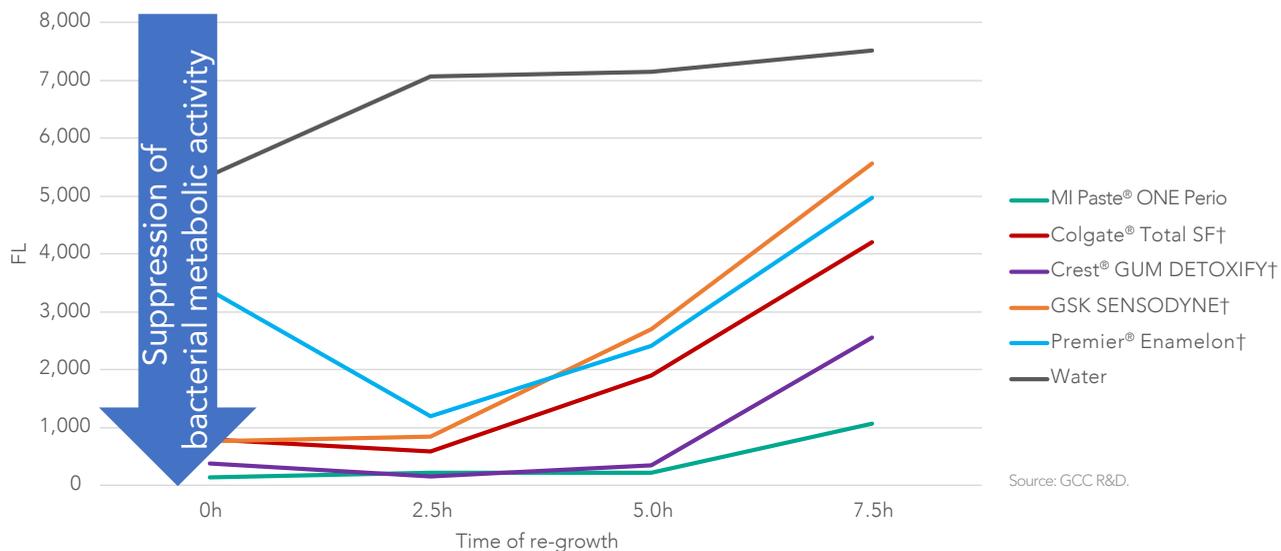

Remineralization

Combination of RECALDENT® (CPP-ACP) + SnF₂ showed highest remineralization effect.

Suitable for perio patients (anti-gingivitis) Suppression of bacterial re-growth

Saliva based multi-species biofilm was cultured for 24 hrs. Supernatant of centrifuged 10-fold diluted paste was applied on the biofilm for 10 min. Bacterial metabolic activity after re-growth was measured by AlamarBlue assay.

437300 MI Paste® ONE Perio
Mild Mint, Contains: 10 tubes (42g each)
