

Why is the NXT Hg5 the *only* collection container intended for use with the NXT Hg5 Amalgam Separator?

The EPA Dental Rule requires most dental practices within the U.S. install an ISO 11143 certified amalgam separator in order to capture harmful amalgam containing mercury before it enters the environment.

- The NXT Hg5 Amalgam Separator system passed the ISO certification as a whole unit. Use of non-Solmetex containers were not tested.
- Warranty on the NXT Hg5 Amalgam Separator is valid only with use of an NXT Hg5 Collection Container.
- Recycling of the NXT Hg5 Collection Container is included in the cost of the container.
- Certificates of Recycling are available online 24/7 in the Solmetex Compliance Center.
